pyFides Design PRD

Brand Identity, Visual Tokens & Dual-Console UI/UX Specification for Lead Designer

Document Class: Premium UI/UX & Brand Design Specification (Figma / Design System)

Aesthetic Reference: Apple Design (Emil Kowalski WWDC principles), Stripe Press, Linear, SpaciaOS

Architecture: Dual-Console Interface (Marketplace & Copilot <---> Treasury & Risk Ledger)

Objective: Deliver a high-prestige, tactile, Apple-caliber financial protocol design.

1. Design Vision, Archetype & Emotional Thesis

The high-concept design elevator pitch: 'Imagine if Apple Wallet, Bloomberg Terminal, and Stripe were reimagined in 2026 as an autonomous fiduciary protocol for AI agents.'

As the global digital economy transitions to machine-to-machine (A2A) commerce, autonomous AI agents purchase compute cycles, proprietary datasets, and automated services from other machines. pyFides is the zero-trust settlement and escrow layer backed by Google's Agent Payments Protocol (AP2), PayPal Orders v2, and PYUSD stablecoins.

- **Strictly Reject AI Hacker ClichØs:** No pitch-black cyberpunk matrix screens, glowing neon border lines, or noisy terminal dumps.
- **The Persona Archetype:** Savile Row meets Silicon Valley. Calm, authoritative, mathematical, tactile, and uncompromisingly lucid.
- **Emotional Objective:** The user must experience immediate financial trust, cryptographic finality, and physical tactile joy.

2. Visual Tokens & Design System Foundation

The brand designer must establish a tokenized Figma library with strict attention to optical sizing and materials:

Design Token	HEX Code	Semantic Purpose & Material Behavior
Warm Stone Canvas	#FAFAF9	Light mode foundation. Organic, warm, tactile paper feel.
Elevated Card White	#FFFFFF	Primary elevated container surface with soft inner rim highlight.
Subtle Stone Border	#E7E5E4	1px hairline separation (stone-200). Never heavy or dark.
Obsidian Charcoal	#0C0A09	Primary typography & high-contrast inverted call-to-actions.
PayPal Royal Navy	#001C64	Institutional brand anchor. Editorial headlines & brand seals.
PayPal Electric Blue	#0070BA	Interactive triggers, focus states, and primary button fills.
Settled Emerald	#059669 / #ECFDF5	Cryptographically verified escrow & settled transaction pill.
Pending Escrow Amber	#D97706 / #FFFBEB	Funds locked in PayPal Orders v2 AUTHORIZE pending hold.
Quarantine Rose	#DC2626 / #FEF2F2	OWASP MCP prompt injection blocked / adversarial alert.

2.1 Typography Hierarchy & Optical Sizing Rules

- **Display Headlines (Editorial):** Instrument Serif / Newsreader with tight tracking (-0.035em). Large, poetic, and confident.
- **Primary Interface:** SF Pro Display / Inter with medium tracking (-0.02em). Section titles, cards, and buttons.
- **Body & Captions:** SF Pro Text / Inter with standard leading and regular weight (400).
- **Monospace Strict Scope:** JetBrains Mono / SF Mono with tabular-nums. STRICTLY reserved for hashes, IDs, monetary sums, and code blocks. Never for body text!

3. Information Architecture: The Dual-Console Paradigm

To eliminate clutter, the entire product is organized into two dedicated experiences connected by an Apple-style floating segmented controller at the top:

- **View 1 (Operational Commerce):** The Autonomous Marketplace & Action-Oriented Copilot. Where users and agents buy and negotiate.
- **View 2 (Financial Command Center):** Executive Treasury & Risk Analytics (AG Charts) + Live A2A Settlement Ledger (AG Grid). Where CFOs monitor liquidity and fraud.

4. Detailed Screen Specifications

Screen 1: The High-Prestige Editorial Landing Page

Editorial hero with poetic serif headline, architectural bento grid, and a live protocol comparison matrix comparing Google AP2 (pyFides) vs. Stripe ACP vs. Coinbase x402. Zero leaked secrets or BN partner codes!

Screen 2: View 1 --- The Autonomous Marketplace & Interactive Copilot

Split-stage layout (60% Store / 40% Copilot):

- **Marketplace Cards:** Displays real procurable assets: NVIDIA H100 GPU Burst ($28.00), Q4 Financial Dataset ($25.00), and AP2 Gateway ($15.00) with 'Procure via Agent Escrow' buttons.
- **The Copilot Thread:** NOT a plain text chat! Renders interactive tactile cards at each stage: (1) Intent Mandate spend cap ($30 max), (2) A2A dialogue, (3) Live PayPal Escrow Hold (AUTHORIZE), (4) SHA-256 Oracle match, and (5) Confirmed PayPal Receipt.

Screen 3: View 2 --- Treasury Analytics (AG Charts) & Settlement Ledger (AG Grid)

Back-of-house financial command center for CFOs and Risk Officers:

- **Executive KPI Cards:** Total Volume Settled, Active Capital Protected, Quarantined Threats, Zero-Loss Rate.
- **AG Charts Enterprise:** Volume & Settlement Flow Area Chart, Threat & Resolution Donut Chart, Escrow Turnaround Bar Chart.
- **Full-Width AG Grid:** Quartz theme with custom cell renderers, sorting, and master-detail row expansion showing canonical AP2 JSON.

Screen 4: Verifiable AP2 Cryptographic Certificate Sheet

Apple Pay / Airline Pass style modal showing Ed25519 principal signature verification, SHA-256 deliverable match, PayPal Capture ID, and 1-click JSON/PDF download.

5. Motion Design, Spring Physics & States Matrix

- **Zero-Latency Press States:** All clickable elements must respond on pointer-down with scale(0.98) and 80ms transitions.
- **Physical Springs:** Critically damped spring motion (damping 1.0, response 0.35s) for segmented tabs and modal sheets.
- **Status Morphing:** Escrow state changes from Amber (Held) to Green (Settled) smoothly cross-fade without layout snaps.
- **Adversarial Attack Reaction:** Quarantined prompt injections trigger a subtle horizontal shake (+/-4px) with soft crimson alert badge.

Design Deliverable	Figma Handoff Acceptance Criteria
Design Tokens & Styles	Light and Dark mode color palettes, typography scales, inner rim highlights, and elevation shadows.
Component Library	Auto-Layout 5.0 components for Nav, Cards, Copilot Steps, AG Charts containers, and Grid cells.
High-Fidelity Screens	1440px Desktop & 390px Mobile mockups for Landing, Marketplace, Copilot, Treasury, and Certificate Modal.
Interactive Prototype	Figma prototype showing end-to-end procurement, chat thread transitions, and view switching.
